Career Profile

I specialise in actively leading software teams to build scalable, well-defined technical solutions.

With over 15 years of experience working in various roles in the software industry, I've learnt to embrace new technologies, define research-backed technical solutions, build productive teams and lead from the front.

I keep my technical skills current by continuing to deliver app-level tasks while also ensuring the team is heading in the right direction to deliver the overall solution efficiently.

Core Skills

- ❖ **Team Leadership**
With a focus on clear ownership, camaraderie, mentoring, two-way feedback, and encouraging constant learning.
- ❖ **Technical Leadership**
I work with business leaders to gather requirements and review feasibility, then use that basis to define technical systems with clear documentation, tooling, risks and justifications.
- ❖ **Software Engineering and Version Control**
I'm also a Senior Full Stack Engineer with a recent focus on TypeScript, Node and React. I have advanced Git and unit testing skills.
- ❖ **Cloud Infrastructure and Deployment**
Recent experience building CI/CD systems for AWS and GCP using best-practices and tooling such as GitHub Actions and Infrastructure as Code.
- ❖ **Generative AI**
I've built tooling and policies to support effective and secure use of AI tools while protecting organisational IP and maintaining software quality.
- ❖ **Project Management and Change Management**
From initial planning to product launch. Maintaining alignment with internal teams and external contractors on the way forward, clearly communicating reasoning and resolving blockers.

Key Achievements

- ❖ Achieved very positive feedback from an anonymous internal upwards feedback process for a technical team I managed.
- ❖ Applied improved tooling, documentation and templating for a previously complicated software release process.
- ❖ Reviewed, scoped and standardised technical infrastructure for an entire company.
- ❖ Designed and implemented various technical process improvements for a fast-paced engineering team.
- ❖ Furthered internal knowledge and improved engineering processes for a complex legacy data importing system.
- ❖ Took ownership of a challenging internal documentation generation process.
- ❖ Built a modular system for a common customer problem to lower code duplication.
- ❖ Managed a development team of varied skill levels and guided them to complete tasks.
- ❖ Led development on a complicated e-commerce site with a short deadline.
- ❖ Built and released a third-party Basecamp 2 client with a focus on use via mobile devices.
- ❖ Improved an in-house CMS by adding a new dynamic content plugin system.

Professional Experience

❖ **Technical Lead at FOB OH**

Nov 2025 - May 2026

I worked directly with the CEO and CPO to ship new features, lead and mentor engineers, and build a high-performing engineering culture.

I led and improved engineering practices, documentation, tooling, releases and deployments.

Took ownership of security incidents and performance issues, with a focus on user experience and load times.

Created detailed technical plans and implemented them using AWS services such as Lambda Functions, ECS, Transfer and S3. Built out initial infrastructure and tooling for a new project which included Supabase, React Native, Expo and a custom Express API.

❖ **Dedicated Technology Team Member at Officeworks**

Apr 2025 - Nov 2025

As part of a new initiative for Officeworks, I took up a new role where I focussed on finding the right hardware and software solution for each customer at the Five Dock store.

❖ **Lead Software Engineer at Liquidise**

Mar 2023 - Aug 2024

Worked closely with the Head of Product and CTO, where I led most technical decisions, planning, scoping amongst developing my own contributions to app-level code and infrastructure.

Architected and built out technical tasks for a new product which included instant digital payments via Blockchain, a low-level payments API and automated creation and management of digital wallets.

Managed a small technical team including running personalised 1 on 1 discussions. Achieved very positive ratings and feedback from an anonymous internal upwards feedback process.

Managed all company technical infrastructure including migrating the main application systems to Docker Containers and Cloud Run deployments via GCP.

Oversaw a third-party Penetration Test, including triaging reported risks, completing some myself and ensuring others were completed and tested thoroughly.

Scoped work for and managed interactions with external technical contractors, tested their work and worked with internal and external Software Engineers to progress complex features.

Migrated the public website to new GCP infrastructure, including building new CI/CD scripts, Docker containers and Cloud Run services.

❖ **Previous Software Roles** are shown on my LinkedIn profile

Sep 2009 - Jan 2023
